

Mini Project 3: Bug tracking and issue reporting from Eclipse

DUE: March 7th, 900 am

1. Objectives

- Install Mylyn
- Use bug reporting and issue tracking tools
- Re-inforce use of git for team collaboration

2. Introduction

In this mini project you are installing Mylyn/Egit to allow issue tracking and bug reporting on your team project. You are provided with a pdf file that describes steps on how to install the plug in (this is a report past SE420 students conducted.). The pdf file also points out a youtube video tutorial captured by same students to walk you through installation. Once you have installed and configured Mylyn and Egit, your task is to replicate Mini Prj#2 by posting it on github, cloning it on your machine, then reporting at least two bugs/issues and their fixes using Mylyn/Egit. Each teammember needs to repeat all steps and issue/track at least 2 bugs.

3. Deliverables

Submit a screenshot (image file) from your github issues/bug reports where all teammebers activities can be illustrated.

Here is an example screenshot from another team:
